

Shivani Srivastava

Python and Gen AI Developer

Gurugram, India | srivastavashivani1994@gmail.com | +91 9975001846 | [LinkedIn](#) | [Github](#)

Software Engineer with 11 years of experience in designing, developing and delivering scalable, high-performance applications across diverse domains including pricing modernization and digital supply chain. Proficient in cloud technologies, containerization and orchestration using Docker and Kubernetes, with a strong focus on building resilient and efficient systems. Also working as an GenAI Engineer to create production grade LLM applications, RAG, and multimodal applications.

SKILLS

- Python
 - Django
 - Flask
 - FastAPI
 - Kafka
 - Splunk
 - PCF
- Dynatrace
 - GIT
 - CICD
 - Checkmarx and SCA Scan
 - Docker
 - Kunernetes
 - Azure Cloud
- Pandas / Numpy
 - Java / Spring Boot
 - Machine Learning
 - Large Language Models (LLM)
 - Generative AI
 - Retrieval-Augmented Generation (RAG)
 - Streamlit
- Langchain
 - Langgraph
 - Langsmith
 - Fine Tuning
 - Hugging Face Transformers
 - Azure Open AI

PROFESSIONAL EXPERIENCE

- Ernst & Young (DELL)**

Nov’24 – Present

Python and Gen AI Developer

Gurugram

 - Developed a user-friendly portal enabling stakeholders to easily access and download comprehensive reports on pricing data and account-to-promotion mappings, enhancing data accessibility and decision-making.
 - Designed and implemented a RAG-powered AI Assistant that ingests server logs and project documentation to perform log analysis, error diagnosis, and knowledge-based query answering.
 - Implemented SSO Authentication using Okta for Django application.
 - Enhanced React-based UI to visualize pricing logs, quotes and transactions, backed by Spring Boot API Service.
 - Led the end-to-end remediation of security vulnerabilities across multiple enterprise applications, achieving 100% issue resolution in both Checkmarx (SAST) and Mend (SCA) scans.
 - Wrote unit tests achieving over 90% Code coverage for both Java and python microservices.
 - Decoupled core pricing logic from third-part Vendavo into a standalone microservice, enabling independent deployments and reducing external dependencies.
 - Technologies used: Python , Django, RAG, Azure OpenAI LLM, Java, Spring-Boot, Oracle DB, PCF, Kubernetes, Docker, React, Kafka, Splunk.
- Ernst & Young (VMware)**

Aug’23 – Oct’24

Gen AI Developer

Gurugram

 - Developed a dashboard to track ServiceNow tickets within selected periods, displaying key metrics such as Time to Acknowledge (TTA), Time to Resolve (TTR), ticket volume, and priority distribution.
 - Developed a conversational AI assistant for the ServiceNow dashboard, allowing stakeholders to query ticket data in real time and obtain instant insights on trends, volumes, priorities, and performance metrics.
 - Built an AI-powered support chatbot by ingesting KEDB documents, enabling intelligent query resolution and faster issue troubleshooting.
 - Technologies used: Python, FastAPI, ServiceNow APIs, SQL, Pandas, LangChain, Azure OpenAI, Azure AI Search, RAG, FAISS, REST APIs, Git, Docker.
- Ernst and Young (DELL)**

Aug’21 – Jan’23

Python Developer

Gurugram

 - Developed an observability dashboard for the Dell Digital Supply Chain project to monitor ETL job performance, enabling real-time detection of job failures, processing delays, and data mismatches, thereby enhancing data pipeline reliability and operational efficiency.
 - Designed and implemented a data migration tool enabling one-click transfer of data between source and destination databases, with real-time dashboard reporting on row counts, failure occurrences and causes, and key performance metrics such as transfer duration.
 - Developed a solution to process JSON data from Kafka, extracting selective fields for database insertion, and optimized processing techniques to handle large data volumes efficiently.
 - Designed and developed an intelligent data-usage analysis solution that scanned workflow metadata to identify unused source and destination database tables, enabling storage optimization and estimating potential cost savings from decommissioning redundant assets.
 - Technologies used: Python, Django, Java, Spring-Boot, MYSQL DB, PCF, Kubernetes, Docker, Kafka, Splunk.

TCS (Ultimatix Mobile COE)

Jun'15 – Aug'21

Information technology Analyst

Nagpur, Pune

- Developed backend APIs using Java and Python to support custom Jenkins mobile deployments.
- Created and maintained Python scripts for automation and process improvements.
- Engineered mFrame, a Siteminder-based SSO product, integrated across all TCS mobile applications.
- Contributed as an Android app developer within the Mobile Centre of Excellence (COE) team.
- Technologies used: Python, Java, Spring-Boot, Android, Postgres DB, Apache Tomcat Server.
